Theory and Background

Part I

1 Core Aspects of Tonal Compositions

1.1 Structured Tonal Motion

1.2 Polyphony

1.3 Musical Time

1.4 Repetition

2 Meta-languages for Abstraction and Structure

2.1 Description, Instantiation, and Interpretation

2.2 Grammar and Syntax

2.2.1 Grammar of Natural Languages

2.2.2 Grammar-Based Music Theories

2.3 Formal Logic and Type Theory

2.3.1 Combinatory Categorical Grammar

3 Constructive Logic and Dependent Type Theory

3.1 Curry-Howard Correspondence

3.2 Motivations For Using Type Theory

3.2.1 Composable and Verifiable Derivations

3.2.2 Abstract Context-Free Grammar as Indexed Type

3.2.3 Modular Constructions Beyond Context-Free

3.2.4 Computational

3.3 Generic Programming

4 Outlook

4.1 Towards a Wholistic Model of Tonal Music

4.1.1 A Plan for Modular Theories that Work Together

4.1.2 Relating General Principles to Style Specific Constraints

4.1.3 A Foundation for a Hack-Free Approach to Algorithmic Composition

4.2 Thesis Outline

A Process Algebra For Metered

Polyphony

Part II

5 Tonal Motion as Hierarchical Processes

5.1 Difficulties in the Assignment of Dependency Relations Among Entities

5.2 Applicability and Inspiration From Existing Process Calculi

5.2.1 Algebra of Communicating Processes

5.2.2 Communicating Sequential Processes

5.2.3 Calculus of Communicating Systems

5.3 Stationary and Transitory Processes

5.4 Temporal Abstractions

5.5 Spatial Abstractions

5.6 Comparison with Existing Theories

6 Timely Processes

6.1 Difficulties in Combining Tonal Structure and Metrical Structure

6.1.1 Schenkerian Approaches to Meter

6.1.2 Coordinating the metrical structure with pitch structure

Passing Note in a Triple Meter

Accented Passing Note

Suspensions

Interruptions

6.1.3 Temporal Proportions: Phrasal expansion and contraction

6.2 Temporal Relations of Processes

6.2.1 Perceived vs Interpreted Simultaneity

6.2.2 A Non-Linear Topology of Musical Time

6.2.3 Metered Processes

6.2.4 Syncopated Processes

6.3 Connection with Existing Theories

General Structural Repetition

Part III

6.4 Various Types of Structural Repetition

6.4.1 Exact Repetition

6.4.2 Surface Variation

6.4.3 Reinterpretation

6.4.4 Transference

6.5 Existing Formalisms of Repetition

6.5.1 Without Syntactical Constraints

6.5.2 With Syntactical Constraints

6.6 A Formal Model of Structural Repetition

6.6.1 Typed Holes and Arrows: A Functional Interpretation of Templates

6.6.2 Repetition structure as Higher-Order Templates

6.6.3 Repetition-Syntax-Material Decomposition

6.6.4 Cross-Domain Analogies of Repetition Structure

Computational Experiments **Part IV**

6.7 Encoding and Generating Instances of Galant Schemata

6.8 Sampling Metered Polyphony with Repetition Constraint

6.9 Compression by Exploiting Structural Repetition
